JACOB NIKOLAU

Product Marketing | AI & Technical B2B Software

New York, NY | jacobnikolau767@gmail.com | 310-985-4638 | github.com/NYCandrun

SUMMARY

Product marketer for AI and technical B2B software, twice the first marketer at a startup. I work closely with CEOs and customers to understand their businesses and shape commercial strategy. I also build with AI, from customer research workflows to model evaluations. Getting complex technology to land clearly, for the people building it and the people buying it, is the work I care about most.

PROFESSIONAL EXPERIENCE

Mosaic | Director of Marketing

AI operations and resource-management software | May 2025 – Jul 2026

- Built Claude skills to extract objections, competitive mentions, and customer evidence from sales calls, reducing case-study production from 50 hours to 5 using a RevOps-built Gong/Salesforce integration.
- Founded the Manage Better Board, a 21-member customer advisory community for architecture and engineering operators; ran six executive roundtables and industry sessions featuring customer speakers.
- Published six customer-approved case studies, each with an ROI calculation translating product use into business value.
- Rebuilt attribution using an LLM-driven workflow that matched attendee emails across 2,190 sales calls to deal contacts and sourcing teams.
- Led a three-person marketing team plus agencies as Mosaic's first marketer; grew marketing-sourced opportunities from 68 to 238 per quarter across research, content, events, and campaigns.
- Managed approximately $130K in quarterly media and sponsorship spend; shifted budget toward webinars after finding that their cost per sales-accepted opportunity was 83% lower than paid digital.
- Owned positioning and messaging for Mosaic's AI resource-management agent, Chello, translating capabilities into stories for operations leaders and executives. Created sales talk tracks that distinguished live functionality from roadmap commitments.
- Directed AI-assisted research across 13 architecture, engineering, and construction sub-industries; recommended sector-specific targeting instead of a broad AEC pitch and built a sales-development playbook with observable prospect signals.
- Designed and fielded a 138-person survey and co-authored The State of AI in A&E 2026, examining AI adoption among architecture and engineering professionals.

BitcoinComputer.io | Head of Growth, Product Marketing (Consultant)

Bitcoin smart-contract platform | Aug 2024 – May 2025

- Served as the first and sole marketer for a pre-revenue platform; wrote a messaging framework defining target audiences, value proposition, differentiators, and competitive positioning.
- Wrote website messaging around JavaScript smart contracts for Bitcoin and mapped site content to technical and business evaluation; compared the platform with zkSync across architecture, security, and developer experience.

NovoEd | Head of Product Marketing

Enterprise learning platform | Apr 2023 – Aug 2024

- Owned positioning and sales enablement for the AI Translation launch, partnering with Sales and Customer Success on rollout. The feature reached about 100,000 learners in its first year and drove over $1M in expansion revenue across CEMEX and Marriott.
- Led product marketing for a platform with 12–24-month enterprise sales cycles and regulated buyers including Goldman Sachs and Capital Group.
- Built a customer-story and reference program across 15 enterprise customers; arranged for Marriott's CHRO to present the engagement on the main stage at Josh Bersin's conference.

PROFESSIONAL EXPERIENCE, CONTINUED

NovoEd | Marketing Strategy Manager

Oct 2021 – Apr 2023

- Developed vertical positioning and packaging for financial services, energy, manufacturing, and hospitality, informed by a jointly built market-sizing model estimating a ~$9B TAM and ~$1.4B mid-market opportunity.
- Designed customer ROI research with Cascade Insights, including six executive interviews and a 127-person survey; turned findings into proof points and a value framework for Sales and Customer Success.
- Ran customer-led webinars and ebooks that were the first conversion point for 33% of marketing-qualified leads and 21% of sales-qualified leads.
- Authored research with Executive Networks based on a survey of 515 learning leaders across five countries, earning coverage in HR Dive and TD Magazine.

Mursion | Manager, Growth Marketing

AI simulation training | Jul 2020 – Sep 2021

- Built the healthcare vertical go-to-market from scratch and landed Duke University Health System; ranked first on the team in new opportunities created and was fastest to reach $3M in attributed pipeline.
- Ran customer webinars with large enterprises and built live product demonstrations; developed a co-branded webinar program with Google.
- Authored research with Future Workplace based on a survey of 300 corporate learning leaders; Harvard Business Review built an article around the findings, and Forbes cited the study.

Feedonomics | Growth Engineer

Commerce data and feed-integration software | Aug 2018 – Jul 2020

- Owned first-touch qualification for enterprise and mid-market prospects; used sales-conversation patterns to improve messaging and worked with RevOps on lead scoring, funnel tracking, and response time.

SELECTED APPLIED AI WORK

Independent Projects | 2026

Built self-directed tools and prototypes with Claude Code and Codex to understand unfamiliar businesses, explore AI tradeoffs, and improve customer and marketing workflows.

- Customer research tools: Desktop Gong/Grain transcript downloader and Markdown merger, plus case-study agents that organize conversations by account, preserve source attribution, and produce drafts and quote exports.
- Interactive product demos: Liquid AI-inspired games and demos exploring on-device versus cloud AI, plus an Ashby-inspired recruiting game showing how data quality shapes decisions.
- BlackRock Aladdin guide: Interactive lessons and executive briefings translating public API specifications and product research into an explanation of the platform and its business value.
- Etta: Desktop learning app combining Claude-generated lessons and quizzes with prerequisite progression, mastery tracking, and spaced review, from algebra through astrophysics.
- Compute marketplace: Buyer/vendor workflows for fixed-price AI jobs with flexible deadlines, covering posting, claiming, delivery, and acceptance to explore the economics of work that can wait.
- Company research workflows: Source collection, citation checks, and independent review for company briefs, with controls that stop completion when required evidence is missing.
- Model evaluation: Vision-language-model benchmark comparing small models; found that prompt formatting could shift accuracy by about 30 percentage points on a hallucination benchmark.
- A&E job board: Automated job discovery, filtering, AI enrichment, and Webflow publishing, with stale-listing handling and a desktop monitoring app.

SKILLS & TOOLS

Positioning, customer research, market sizing, competitive analysis, go-to-market strategy, agent workflows, model evaluation. Claude, Claude Code, Codex, Gong, Salesforce, HubSpot.

EDUCATION

University of California, Berkeley — BA, Geography; dual concentration in Earth & Planetary Science and Environmental Economics.
